## DETAILED ACTION

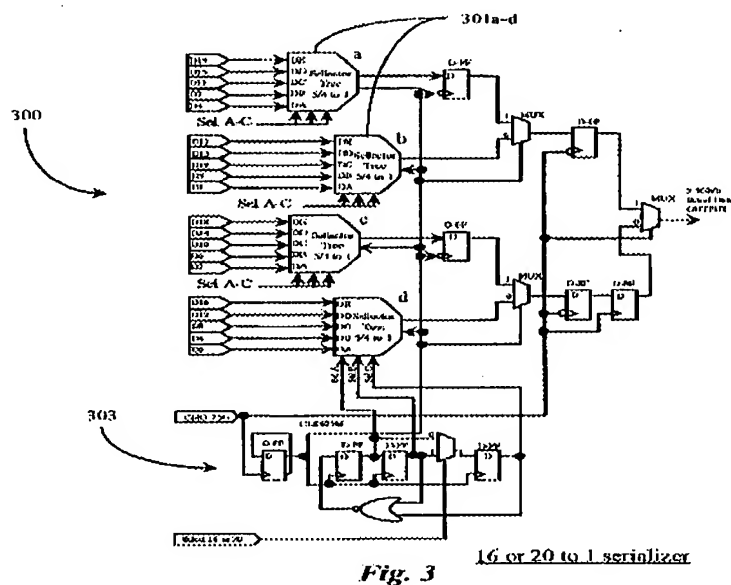

### Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1-3, 6, 8-10, 18-24 are rejected under 35 U.S.C. 102(e) as being anticipated by Measor PG-PUB 2001/0007577.

Re Claims 1, 18, 20, 24, fig. 3 teaches a multimode serializer 300 (An assembler) comprising: D0~D19 inputs (a plurality of inputs) each of the put having a first clock rate

Art Unit: 2616

(a first bandwidth); a plurality of Selector Tree 5/4 to 1 (a plurality of multiplexers) with a output (a multiplexer output) wherein 4 sets of inputs equals 4 Selector Tree 5/4 to 1 and each receiving a select signal SEL A~C; connected to each Selector Tree 5/4 to 1 outputs are D-FF (one or more serial connected cells... stepped arranged of cells), wherein outputs from the D-FF forms 16 bit or 20 bit word (a concatenated output) via a clock cycle of 1.25 G; the final output MUX is rated at 2.5Gb/s serial data output (a second bandwidth that is larger than the first bandwidth) [0036+].

Re Claim 2, refer to Claim 1, wherein each Selector Tree 5/4 to 1 receives different Sel A-C (selector signal) in each cycle clock wherein the Sel A-C controls the output from the Selector Tree 5/4 to 1.

Re Claim 3 refer to Claim 2, fig. 4, table 400 teaches Sel A-C defined by a sequence of signal bit signals wherein each Sel equal a number of DOUT.

Re Claims 6, 22, 23, refer to Claim 1, the D-FF are in decreasing number of one or more serially paths connected between adjacent Selector Tree 5/4 to 1s.

Re Claim 8, refer to Claim 1, wherein the rates are multiple of each other.

Re Claim 9, D-FF are flip flops.

Re Claim 10, refer to Claim 1, wherein the outputs corresponds to a different ones of the plurality of inputs.

Re Claims 19, 21, refer to Claim 18, See operating the clock 303.

***Allowable Subject Matter***

3. Claims 4, 6, 7 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The following is a statement of reasons for the indication of allowable subject matter:

In combination with claims 1-4, prior art fail to teach the rotating selector for generating the bit sequence defining the selector signal as claimed in claim 4.

4. Claims 11-17 are allowed

The following is a statement of reasons for the indication of allowable subject matter:

Prior art fails to teach the disassembler having a plurality of cells to receive a plurality of data packets whereby some of the plurality cells are serially connected to a number of additional cells to form the stepped arrangement of cells in a sequence manner.
